

Hi John,

Thank you for your feedback on our project so far! I'm happy to provide an update on the improvements we've made:

We ran your website through Lighthouse, and I'm pleased to report that the accessibility score is **100** (see attached screenshot for reference). This means all key accessibility standards are being met, including proper contrast ratios, semantic HTML usage, and keyboard navigation.

New Offers Page: As suggested, we created a new page called **“Offers”** to highlight upcoming promotions and special deals at the showroom. This page features three main offers:

Exchange your old car and get €20,000 extra value on trade-ins.

Free extended 1-year warranty on all purchases this month.

Book a test drive for a chance to win a weekend getaway.

The page also includes easy navigation back to the Main, About, and Contact pages, and maintains the site's consistent styling and branding.

We have adjusted the layout to ensure full responsiveness across devices, including mobile phones. All boxes and buttons now scale appropriately, text sizes adjust for smaller screens, and navigation remains intuitive on all viewports.

You can view the updated website on GitHub Pages here:

https://vlynx8.github.io/WebDev_Project_EasternPower/

Please let me know if you have any further suggestions or additional changes you'd like to see. We're excited for your feedback!

Best regards.
